

NATURAL IMMUNE BOOSTER FOR HEALTHY GROWTH AND DEVELOPMENT

The environment affects children differently than adults.

World Health Organization (WHO) has reported that children breathe in more air, drink more

water and eat more food per unit of body weight than adults do. Due to their physiology and behaviour, children are more at risk of heavy exposure to toxins. They also have more years of life ahead, which means they will be exposed to today's environmental hazards for a much longer period of time.

Children's central nervous, immune, and digestive systems are still developing. At early stages of development, exposure to environmental toxicants can lead to irreversible damage. Children's bodies may not be able to break down and get rid of harmful contaminants as easily as adults can.

SOLUTION:

Glutathione plays a key role in boosting immune cells to fight off virus and bacteria. Glutathione is also known to enhance children's brain power by protecting their brain cells from oxidative damage and safeguarding nerve cell integrity.

Glutathione is also a master antioxidant that protects the cells by neutralising free radical damage especially affecting children's eyes (such as dryness and early onset of short-sightedness) caused by daily exposure to light.

OUR DISCOVERY:

EDG3 Junior is made from the US-patented amino acid blend used in EDG3, which consists of the key nutrients for the body to naturally generate glutathione. This formula helps in building a stronger immune system among children, because glutathione works from inside the cell and can help protect them from environmental toxicant damage. Everyday, the body uses up the glutathione naturally produced for all metabolic processes. Hence, it is important for your children to consume the right nutrients needed for daily glutathione production.

The patented amino acid blend used in EDG3 Junior is formulated by renowned research scientist and physician, Dr Albert Crum, a Harvard alumnus. It is easily absorbed by the body and, owing to its unique technology, has been clinically proven to effectively improve children's immunity and to protect their brain and nervous system development.

THE RESULTS:

- Strengthens immunity to prevent flu and colds
- Improves your child's memory, mental focus, and concentration
- Promotes healthier vision
- Supports a healthy digestive system
- Protects against contaminants and pollutant damage

KEY INGREDIENTS:

- Lactose
- US-patented amino acid blend (Glycine, L-glutamine, L-cystine, L-selenomethionine)
- Strawberry juice powder

HOW TO CONSUME:

Children, ages 7 to 12: Take two (2) tablets in the morning, and two (2) tablets in the afternoon.

Ages 6 and below: Please consult physician first. One bottle of EDG3 Junior contains 60 chewable tablets.
